Application description

MyClassboard Android application is created based on the requirements below:

Requirement 1: Get all the schedule in one calendar view

- 1. Unit Tests per month
- 2. Activities per month
- 3. Quarterly Assessments
- 4. Holidays

Advantages

- 1. Built with integration with Google Calendar
- 2. Class teacher needs to update Google Calendar only.
- 3. Reduce chances of missing schedule
- 4. One place of reference of schedule
- 5. Can be updated in just few mints
- 6. Available to all parents on the move at one place to refer for schedule

Current Difficulties

- 1. Need to refer to School Dairy multiple times and find pages where we have written the schedule.
- 2. My Class board provides them on multiple places and in different file formats.

Requirement 2: Get all the Assignment tasks for all subjects

- 1. Homework for each lesson
- 2. Prepare a chapter at home
- 3. Write question and answers, fill in the blanks etc. for a chapter
- 4. Activity assignments details
- 5. Unit test syllabus

Advantages

- 1. Class teacher needs to update Google Spreadsheet.
- 2. Google Spreadsheet gets published immediately.
- 3. Update layout of the spreadsheet without impacting the Application layout.

Requirement 3: Get all Announcements

- 1. Additional activity courses to enrol
- 2. Holiday notice
- 3. Competition announcements

MyClassboard Android application

- 4. Major Event announcements
- 5. Extra-curricular activity announcements
- 6. Fee payment notice

Advantages

- 1. School Admin needs to update Google Spreadsheet.
- 2. Google Spreadsheet gets published immediately.
- 3. Application gets instant update.
- 4. Update layout of the spreadsheet without impacting the Application layout.

Requirement 4: Get all documents uploaded in separate folders

- 1. Question sets
- 2. Monthly activity details
- 3. Semester Exam syllabus
- 4. Unit test schedule and syllabus
- 5. Project details

Advantage

- 1. Class teacher needs to upload to Google Drive.
- 2. Document gets published immediately.
- 3. Application gets instant update.
- 4. No impact to the Application layout.

Requirement 5: Publish Events with pictures

- 1. Tournament Achievements
- 2. Workshops
- 3. Celebrations

Advantage

- 1. Class teacher needs to update Google Webpage.
- 2. Google webpage integrates with Google photos, Drive, spreadsheet, Docs etc.
- 3. Page gets published immediately.
- 4. Application gets instant update.
- 5. No impact to the Application layout on changing the webpage layout.

Requirement 6: Training Videos for reference

1. Videos that should help students to understand topics

Design

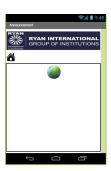

- 1. MIT App Inventor as the Android development environment
- 2. MIT AI App companion used as Application emulator to test
- 3. The application integrates with Google applications under read-only public view
 - a. Google Calendar used to record and publish schedule
 - b. Google spreadsheet used to record and publish Assignments
 - c. Google Spreadsheet used to record and publish Announcements
 - d. Google Drive used to upload and publish documents
 - e. Google Website and Webpage used to publish events
 - f. Google Website and webpage used to publish tutorial videos
- 4. Embed HTML code from Google applications to be used to display on the Application web viewer.
- 5. GitHub Repository and Webpages used to integrate embedded webpages into Android App
- 6. No external applications required by user eg. MS word, Pdf reader etc.
- 7. Coding is at 'building block' level and not syntax type statements.
- 8. No specific programming language is used.

User Interface Layout Design details – Home Screen

User Interface Design details – Utility screens

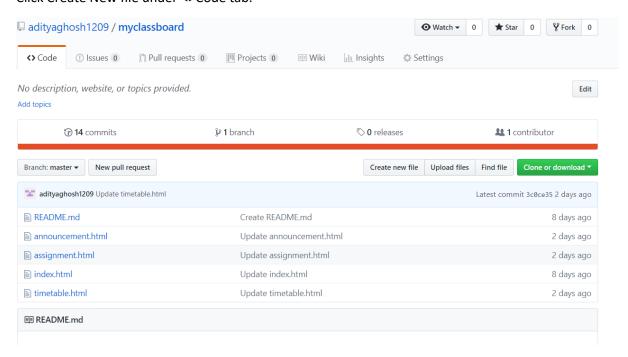

Get HTML code from Google Spreadsheet

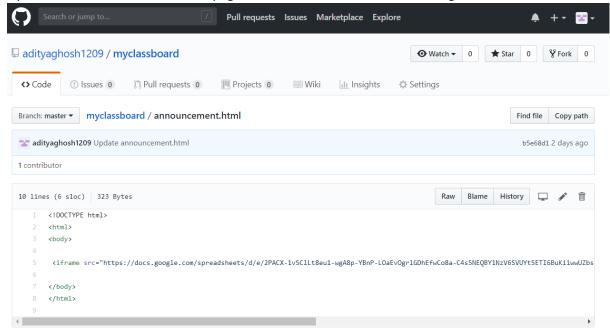

Create HTML file in GITHUB

Click Create New file under <> Code tab.

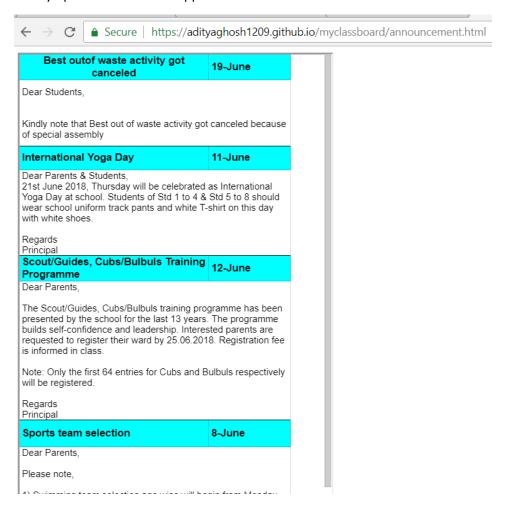

Update HTML code in GitHub Webpage and click Commit to save the changes.

Test the HTML Code.

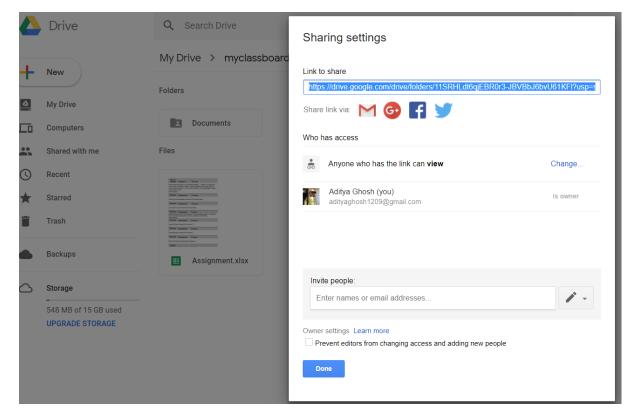

Finally update the Android Application Web viewer with the code.

Get Shared linked from Google Drive

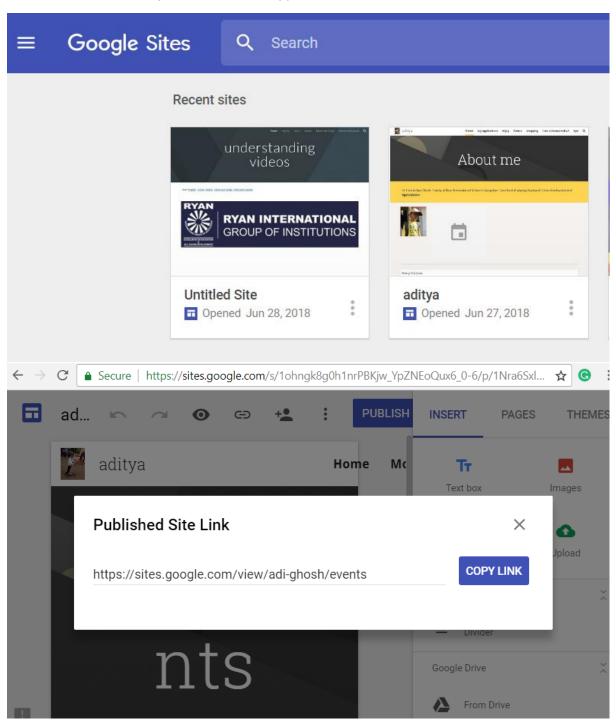

Make the folder shared as read-only.

Get the Shared link and update the Android Application Web viewer with the code.

Get Google Site address

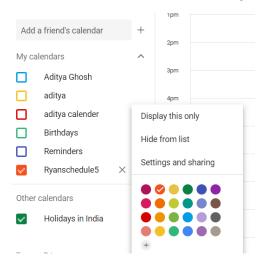

Get the Shared link and update the Android Application Web viewer with the code.

Get HTML code for Google Calendar

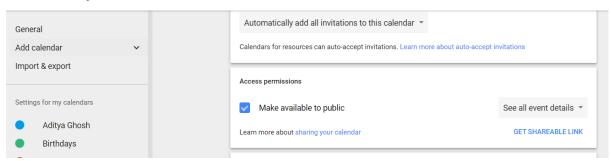

Login to Google Calendar.

Select the Calendar and click on Settings and Sharing

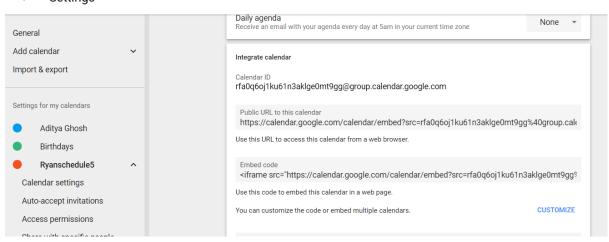

Make the calendar Public

← Settings

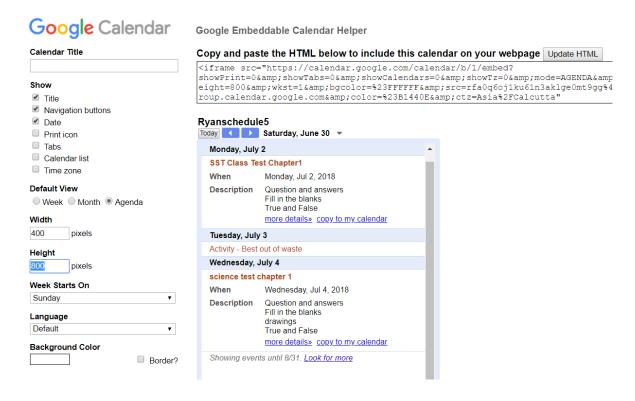

Under Integrate Calendar go to Customize

← Settings

Customise settings as below.

Copy the HTML Code and update the GitHub Webpage Schedule.html

Finally build the apk file

The apk package file is available for download in Google drive
